ACI Certified Shotcrete Nozzleman looking to bring a large skill set to a local company or firm. I am a thorough and hard working foreman who was raised to be the hardest worker in the room, and if you're on time, you're late. I'm a quick learner and a teacher by nature, it's important to me to teach the younger individuals coming in the ropes instead of shortcuts. Crew members who work well together create a better and safer work environment. I am looking to add to my current skill set and provide life experience and knowledge to an accepting firm.

Willing to relocate: Anywhere

Authorized to work in the US for any employer

Work Experience

Foreman/Shotcrete Nozzleman/Laborer

KHM Inc-Binghamton, NY

August 2009 to Present

Working many years as a foreman for a subcontractor has helped me gain a vast knowledge of different types of construction procedures and equipment. ACI certified in Shotcrete, wet mix, vertical and overhead applications, with very high attention to detail in my work. I am one of 7 certified nozzlemen in NY. Was part of many bridge and building rehab projects, including bridge overlays, removing and installing new joints, sand blasting, tying rebar, finishing concrete, and painting. I work quickly but efficiently. I can read plans/drawings/blue prints and can easily run a crew of 10 men. I have a great understanding of OSHA rules and regulations, I work hard to keep myself and my men safe. Additional responsibilities include, coordinate and delegate tasks, supervise and train, meet all safety precautions/ OSHA standards, resolve any and all problems quick and efficiently, keep track of time spent on jobs, keep a log book of daily activities and report those to the project manager.

Estimator

Binghamton, NY

January 2023 to May 2023

Estimating for a plumbing contractor. I have broadened my blue print reading ability, as well as taking jobs off. Was responsible for going to prebid meetings and asking any questions to engineers that may arise. Contacting vendors and subcontractors for specific projects was a crucial part of being competitive in all bids.

Laborer

Binghamton Precast-Binghamton, NY

August 2007 to May 2008

Responsibilities

I was responsible for tying rebar and placing them in forms. After they were set in forms I would align forms according to the blue prints. Once every form was set and ready we would pour them and I would finish the concrete.

Accomplishments

Learned basics for tying rebar, finishing concrete, building forms. Also learned how to run certain equipment that was available.

Skills Used

Finishing concrete and tying rebar

Education

some college in computer science

Broome community college - Binghamton, NY
2003 to 2005

Diploma

Whitney Point Senior High School - Whitney Point, NY
1999 to 2003
